PUJYA AGRITECH

ESTD 2017

BUILD • PLANT • GROW

Complete

Green House

Solutions

from planning to profit

Precision Engineering

Optimized Climate Control

High Yield Productivity

Durable & Long Lasting

Sustainable & Profitable

✓ Custom Design

✓ Quality Materials

✓ Expert Installation

✓ After Sales Support

Who We are

Established in 2017 and headquartered in Ahmedabad, **Pujya Agritech** a brand of **Pujya Sales Corporation** is a professionally managed organization delivering advanced and reliable solutions in protected farming infrastructure across India. With a strong foundation built on technical expertise, industry experience, and customer-centric values, we specialize in the design, supply, and execution of turnkey Poly House, Greenhouse, Fan & Pad Cooling Systems, and Shade Net House projects. Over the years, we have successfully executed a diverse portfolio of Government, Institutional, and Farmer-based projects, establishing ourselves as a trusted partner in modern agriculture development.

Mission

To deliver end-to-end greenhouse infrastructure solutions with superior quality, precision engineering, and unmatched service support, enabling our clients to achieve higher productivity and long-term profitability.

Vision

To be a leading force in transforming Indian agriculture through innovative, sustainable, and high-performance protected cultivation solutions.

Since inception, Pujya Sales Corporation has successfully delivered numerous projects across India, catering to:

- Government Bodies
- Agricultural Institutions
- Commercial Growers
- Progressive Farmers

Our projects reflect a blend of technical precision, durability, and performance-driven design.

Certificates

An Empaneled by

Dir. of Horti., Gujarat State for Construction of Green Houses/Net Houses

A Proud member of

Indian Green House Manufacturers Association

Greenhouse

The Future of Agriculture

A Greenhouse is a scientifically engineered protected cultivation structure designed to create an ideal environment for plant growth. Covered with high-quality UV-stabilized films or glass, a greenhouse allows precise control over critical growing conditions such as temperature, humidity, light intensity, ventilation, and irrigation.

Key Benefits of Greenhouse Cultivation

- Year-round crop production
- Higher yield and superior produce quality
- Protection from rain, wind, hail, and extreme temperatures
- Reduced pest and disease incidence
- Efficient use of water and fertilizers
- Better control over crop growth and harvest timing
- Increased profitability and return on investment
- Suitable for high-value vegetables, flowers, herbs, and nursery crops

Applications

Greenhouses are widely used for the cultivation of:

- Vegetables (Capsicum, Cucumber, Tomato, etc.)
- Flowers (Rose, Gerbera, Carnation, Orchid, etc.)
- Exotic and High-Value Crops
- Nursery and Seedling Production
- Medicinal & Aromatic Plants
- Research and Commercial Farming

Smart Farming Structures for Higher Productivity

Naturally Ventilated Poly House

Designed for sustainable cultivation, naturally ventilated greenhouses reduce energy consumption while maintaining ideal growing conditions. Natural air circulation continuously expels excess heat and moisture, creating a healthier environment for flowers and sensitive crops. Adaptable to diverse weather conditions, these greenhouses are a reliable solution for growers around the globe.

MODEL	Standard Grids	Std. Gutter Height	Std. Top Height	Top Vent	Side Vent	Side Corridors
NVPH	8m x 4m	4m / 4.5m	6m / 6.5m	1m / 1.2 m	3 m /3.5m	2m /2.5m

Suitable for: Exotic Vegetables & Flowers etc.

FAN & PAD POLY HOUSE

An advanced climate-controlled cultivation system designed for year-round production of high-value vegetables, flowers, nursery plants, hydroponic crops, medicinal plants, and exotic produce. By maintaining optimum temperature and humidity, it ensures superior crop quality, higher yields, and enhanced profitability even during extreme weather conditions.

MODEL	Standard Grids	Std. Gutter Height	Std. Top Height	Top Vent	Side Vent	Side Corridors
F&P	8m x 4m	3.5m / 4m	5.5m / 6m	NA	NA	2m /2.5m

Suitable for: Hydroponics, Exotic Vegetables, Exotic Fruits, Tissue Culture etc.

DOME SHAPE NET HOUSE

A modern protected cultivation structure with a curved roof design covered by high-quality shade or insect-proof net. It provides excellent ventilation, protection from insects and adverse weather conditions, and creates an ideal environment for growing vegetables, flowers, nurseries, and high-value crops while reducing cultivation costs.

MODEL	Standard Grids	Std. Side Height	Std. Top Height	Top Vent	Side Vent	Side Corridors
DSNH	6m x 4m / 6m x 6m	3.5m / 4m	5.5m / 6m	NA	NA	2m /2.5m

Suitable for: Exotic Vegetables & Nursery Holders etc.

Grow More.

FLAT TYPE NET HOUSE

Flat Type Net House is a cost-effective protected cultivation structure designed to protect crops from insects, birds, and harsh weather conditions while improving crop quality and productivity through a controlled growing environment.

MODEL	Standard Grids	Std. Side Height	Std. Top Height	Top Vent	Side Vent	Side Corridors
FTNH	6m x 4m / 6m x 6m	4m / 4.5m /5m	4m / 4.5m /5m	NA	NA	2m /2.5m

Suitable for: Exotic Vegetables & Nursery Holders etc.

WIRE ROPE NET HOUSE

An advanced protected cultivation structure designed with high-tensile wire rope support systems and premium-quality nets. It provides effective protection against insects, birds, and adverse weather conditions while ensuring excellent ventilation and optimum growing conditions. Ideal for vegetables, flowers, fruits, and nursery crops, it helps farmers achieve higher productivity, better crop quality, and improved profitability.

MODEL	Standard Grids	Std. Side Height	Std. Top Height	Top Vent	Side Vent	Side Corridors
WRNH	8m x 6m/ 8m x 4m	4m / 5m	4m / 5m	NA	NA	2m /2.5m

Suitable for: Exotic Vegetables, Ornamental Plants, Medicinal Plants, etc.

MULTI SPAN TUNNEL

Multi Span Tunnel is a large protected cultivation structure formed by connecting multiple tunnel units. It provides an ideal microclimate for vegetables, flowers, and nursery crops, ensuring higher productivity, improved crop quality, and protection from adverse weather conditions.

MODEL	Standard Grids	Std. Side Height	Std. Top Height	Top Vent	Side Vent	Side Corridors
MST	8m x 2.5m/ 9m x 3m	2m / 2.5m	4.5m / 5m	NA	NA	2m

Suitable for: Exotic Vegetables, Exotic Fruit like Blue Berry etc.

Grow Better.

Capital Investment After Subsidy

Flower Cultivation Under Naturally Ventilated Poly House (1 Acre)

INCOME	GERBERA	DUTCH ROSE	ORCHID
Project Investment	76 TO 78 Lakhs	70 TO 72 Lakhs	80 TO 82 Lakhs
Subsidy Amount Aprox	38 TO 39 Lakhs	35 TO 36 Lakhs	40 TO 41 Lakhs
Net Project Investment (After Subsidy Assistance)	38 TO 39 Lakhs	35 TO 36 Lakhs	40 TO 41 Lakhs

Vegetable Cultivation Under Naturally Ventilated Poly House (1 Acre)

INCOME	ENGLISH CUCUMBER	COLORED CAPSICUM	TOMATO
Project Investment	48 To 50 Lakhs	48 TO 50 Lakhs	48 TO 50 Lakhs
Subsidy Amount Aprox	23 To 25 Lakhs	23 to 25 Lakhs	23 to 25 Lakhs
Net Project Investment (After Subsidy Assistance)	23 To 25 Lakhs	23 to 25 Lakhs	23 to 25 Lakhs

Vegetable Cultivation Under Shade Net House (1 Acre) ₹ 13 lacs to ₹ 15 lacs*

INCOME	ENGLISH CUCUMBER	COLORED CAPSICUM	TOMATO
Project Investment	30 TO 32 Lakhs	30 TO 32 Lakhs	30 TO 32 Lakhs
Subsidy Amount Aprox	17 to 18 Lakhs	17 to 18 Lakhs	17 to 18 Lakhs
Net Project Investment (After Subsidy Assistance)	13 to 15 Lakhs	13 to 15 Lakhs	13 to 15 Lakhs

Gov. Assistance

- 100% Tax Free Income
- Up to 65% Government Subsidy Facility
- Up to 90% Bank Loan Facility & 3% Interest Subsidy by AIF
- Up to 2 Crore Collateral Free Loan* (CGTMSE)

Hydroponics • Soilless Farming • Greenhouse Automation

Hydroponics Farming

- Plants receive nutrients through water.
- **Common systems:**
  NFT, DWC, Dutch Bucket, Drip, Ebb & Flow.

Common Hydroponic Crops

- Lettuce
- Spinach
- Kale
- Herbs (Basil, Mint, Coriander)
- Strawberry
- Microgreens

Soilless Farming

Substrate (Media) Culture:

- Plants are grown in inert media such as cocopeat, perlite, rockwool, or expanded clay.
- Nutrient solution is delivered through drip irrigation.
- Widely used for tomatoes, cucumbers, capsicum, strawberries, and flowers.

Greenhouse Automation System

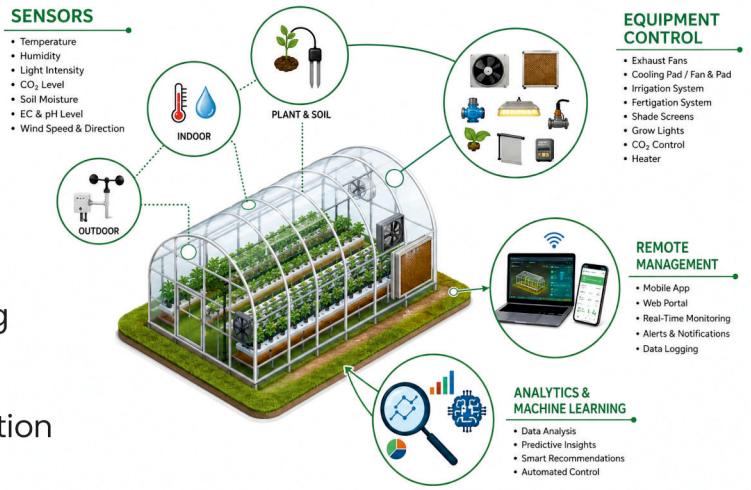
Smart Technology for Precision Farming

A Greenhouse Automation System intelligently controls temperature, humidity, irrigation, lighting, and ventilation to create the ideal growing environment. It improves crop quality, increases yield, reduces labor, and optimizes resource usage through smart, data-driven automation.

PUJYA AGRITECH provides customized greenhouse automation solutions for commercial farms, nurseries, research institutions, and high-value horticulture projects.

Key Features:

- Automatic Climate Control
- Intelligent Irrigation & Fertigation
- Temperature & Humidity Monitoring
- Ventilation & Exhaust Fan Control
- Fan & Pad Cooling System Automation



Our Presence

10+ Years of Experience

Global Presence :
